<b>EDUCATION</b>	<b>Ph.D. in Computer Science</b> <b>Stanford University</b> <ul style="list-style-type: none"><li>Cryptography, Systems Security, Privacy-Preserving Systems</li></ul>	Fall 2025–3030 (expected)
	<b>M.S. in Computer Science</b> (Computer and Network Security) <b>Stanford University</b> <ul style="list-style-type: none"><li>CS: Cryptography, Computer Security, Operating Systems, and Distributed Systems</li></ul>	Fall 2024–Winter 2025
	<b>B.S. in Mathematics &amp; Computer Science with Honors</b> (Systems) <b>Stanford University</b> <ul style="list-style-type: none"><li>CS: Computational Complexity, Algorithms, Mathematical Foundations of Computing</li><li>Math: Linear Algebra, Group Theory, Number Theory, Probability, and Metalogic</li></ul>	Fall 2020–Spring 2024
<b>PUBLICATIONS</b>	<ol style="list-style-type: none"><li><b>Ihyun Nam</b>, “The Avg-Act Swap and Plaintext Overflow Detection in Fully Homomorphic Operations Over Deep Circuits,” in the Proceedings of the 14<sup>th</sup> ACM Conference on Data and Application Security and Privacy, June 2024 (<a href="#">pdf</a>)</li><li>Xiaoyu He, Emily Huang, <b>Ihyun Nam</b>, Rishabh Thaper, “Shuffle Squares and Reverse Shuffle Squares,” appeared in the European Journal of Combinatorics (Vol 116), February 2024 (<a href="#">pdf</a>) <i>*Alphabetical author listing, as is conventional in Mathematics.</i></li></ol>	
<b>RESEARCH EXPERIENCE</b>	<b>A Sparse Polynomial Commitment Scheme from Lattices</b> ( <a href="#">pdf</a> ) <b>Advisor:</b> Professor Dan Boneh <ul style="list-style-type: none"><li>Built the first sparse polynomial commitment scheme from lattices based on a prior field-based scheme, and proved perfect completeness and knowledge soundness</li><li>Standardized the scheme to use any (non-sparse) lattice-based PCS in the commit phase and achieve optimal prover costs linear in the polynomial sparsity</li></ul>	Winter 2024–Present Stanford CS
	<b>Authentication Logging to a Public Blockchain</b> ( <a href="#">pdf</a> ) <b>Advisor:</b> Professors David Mazières & Emma Dauterman <ul style="list-style-type: none"><li>Designed a privacy-preserving authentication logging protocol that (1) does not require a trusted log server during enrollment and audit for correct service and (2) guarantees user privacy against a colluding log server and relying party, unlike the state-of-the-art solution larch</li><li>Log server does not learn anything about the RP from users' logged records, and a malicious log server cannot authenticate on behalf of a user.</li><li>Implemented protocol in Rust, including a bare metal blockchain; &lt;1 second login time expected</li></ul>	Winter 2024–Present Stanford CS
	<b>Faster Fully Homomorphic Encryption with Plaintext Overflow Detection</b> ( <a href="#">pdf</a> ) <b>Advisor:</b> Professor John Mitchell <ul style="list-style-type: none"><li>Designed ‘Swap’, a method to transform any traditional neural network to achieve faster encrypted inference on FHE-encrypted data, by averaging data before applying activation functions</li><li>Applied the Swap to two neural networks I built for a 25% speedup with 98% accuracy, and to the Lenet-5 neural network for a 28% speedup with 90% accuracy</li><li>Devised the first plaintext overflow detection protocol for fixed-point arithmetic FHE and showed applicability to the Cheon-Kim-Kim-Song and BFV/GV schemes</li><li>Published and presented results as the solo author at the ACM Conference on Data and Application Security and Privacy (Porto, Portugal, 21% acceptance rate)</li><li>Poster presentation at the Symposia for Undergraduate Research and Public Service (Stanford, CA – October 2023)</li></ul>	Spring–Fall 2023 Stanford CS
	<b>Identifying TLS Clients via Unsupervised Learning on Domain Names</b> ( <a href="#">pdf</a> ) <b>Advisor:</b> Professor Zakir Durumeric <ul style="list-style-type: none"><li>Built and evaluated Clid: a TLS client identification tool that uses unsupervised learning to map clients to domain names that are most informative of their identity, among prior connections</li><li>Designed a client-domain algorithm based on frequency and exclusivity of connections, and clustering to abstract out errors in real data</li><li>Clid identifies the most associated domain names for &gt;60% of clients in all test TLS sets</li></ul>	Spring–Summer 2023 Stanford CS
	<b>A Survey of Multivariate Polynomial Commitment Schemes</b> ( <a href="#">pdf</a> ) <b>Advisor:</b> Professor Dan Boneh	Fall–Winter 2023 Stanford CS

- Wrote a survey of eight multivariate polynomial commitments schemes and their security analyses

**Shuffle Squares and Reverse Shuffle Squares ([pdf](#))**

Summer–Fall 2021

Stanford Math

**Advisor:** Professor Paweł Grzegrzolka

- Proved the Henshall-Rampersad-Shallit conjecture on enumerating shuffle squares (words containing identical disjoint strings) that was previously only shown with empirical evidence
- Disproved a companion conjecture on *reverse* shuffle squares and proved a novel alternative, contributing to efficient error correcting codes in deletion channels
- Published results at the European Journal of Combinatorics (February 2024)
- Poster presentation at the Symposia for Undergraduate Research and Public Service (Stanford, CA – October 2021)

**TEACHING**

**Math 19** (Calculus) – Stanford University

Fall 2024

**Instructor:** Zachary Wickham

- **Teaching Assistant:** Led office hours (5hrs/week), held exam review sessions, and graded exams for 230 students

**Hack Lab** (Introduction to Cybersecurity) – Stanford University

Fall 2023

**Instructor:** Alex Stamos

- **Teaching assistant:** Led lab sections (1hr/week) on exploiting and defending web vulnerabilities, held office hours (1hr/week), and wrote and graded exams for 100 students
- **Lab assistant:** Transitioned GCP virtual Kali attack machines and targets to host in a new on-prem Proxmox cluster, to be used by Stanford CS classes and computer security labs

**Stanford University Mathematics Camp** – Stanford University

Summer 2023

**Instructor:** Rick Sommer

- **Teaching Assistant:** Advised five crypto research projects (8hrs/week) and led group theory problem sessions (3hrs/day)
- **Residential Counselor:** Led social activities and counselled 40 high school students

**Paschar Consulting** – Seoul, South Korea

Summer 2021

- **Tutor:** Mentored high school seniors for college admissions via daily meetings and essay editing

**Bloomsbury Education** – Jeju, South Korea

Summer 2020

- **Math Tutor:** Taught International Baccalaureate Higher Level Math to Year 3–12 students
- **Latin Tutor:** Taught iGCSE Latin to Year 9 students

**ACCOLADES**

**School of Engineering Fellowship**

Fall 2025

**Organization:** Stanford University

- Fellowship for top incoming PhD students.

**The Hoefer Prize for Writing in the Major**

Spring 2024

**Organization:** Stanford University

- One of seven annual recipients chosen for quality of writing in thesis work, nominated by faculty
- Recognized for CS Honors Thesis on novel research on fully homomorphic encryption

**IORH Blockchain Research Grant**

Spring 2024

**Organization:** Stanford IOG Research Hub

- Received a \$118K grant for proposed research on authentication logging to a public blockchain
- Pitched grant to principal investigator and drafted proposal

**Computer Science Honors Program**

Spring 2023–2024

**Organization:** Stanford CS Department

- One of 16 students accepted to the Honors program in the CS major, through research proposal and faculty recommendation
- Presented thesis on fully homomorphic encryption to CS faculty at the department colloquium

**Conference Grant**

Spring 2024

**Organization:** Stanford University

- One of eight recipients of a \$1.5K travel grant to present accepted research at CODASPY '24

**Presidential Science Scholarship**

2020–2024

**Organization:** Korea Student Aid Foundation

	<ul style="list-style-type: none"> <li>• One of 20 annual recipients of a \$200K college scholarship awarded by the President of Korea</li> <li>• Selected for excellence in Math and interest in studying cryptography in university</li> </ul>	
	<b>Scholarship for the Richard Tapia Conference for Diversity in Computing</b>	Summer 2023
	<b>Organization:</b> Stanford CS Department	
	<ul style="list-style-type: none"> <li>• One of 18 annual recipients to represent Stanford's CS department through booth</li> </ul>	
	<b>Major Grant</b>	Spring 2023
	<b>Organization:</b> Stanford University	
	<ul style="list-style-type: none"> <li>• Received a \$7.5K grant (largest grant for undergraduates, 68% acceptance rate) for 10-week research on fully homomorphic encryption advised by Professor Dan Boneh</li> </ul>	
	<b>Talent Award of Korea</b>	Winter 2022
	<b>Organization:</b> Deputy Prime Minister & Minister of Education of Korea	
	<ul style="list-style-type: none"> <li>• One of 50 annual recipients under 34, selected by a faculty committee for excellence in chosen field</li> <li>• Recognized for academic work in cryptography and community service for gender minorities</li> </ul>	
<b>LEADERSHIP AND SERVICE</b>	<b>Board Member (2024); Mentee (2020-23)</b>	2020–2024
	<b>Organization:</b> Stanford Women in Math Mentoring	
	<ul style="list-style-type: none"> <li>• Led recruiting of 80 members, hosted faculty talks on diversity in Math, and organized three socials</li> </ul>	
	<b>Community Outreach Intern</b>	2021–2022
	<b>Organization:</b> Stanford Women's Community Center	
	<ul style="list-style-type: none"> <li>• Hosted welcome for 200 minority students and interviewed 10 women leaders at Stanford for project</li> </ul>	
	<b>Volunteer</b>	2017–2018, 2024
	<b>Organization:</b> Jeju Women's Association	
	<ul style="list-style-type: none"> <li>• Helped organize their annual feminist film festival by translating Korean materials to English</li> </ul>	
<b>INDUSTRY</b>	<b>Research Intern (Mobile Game Industry)</b>	Summer 2022
	<b>Organization:</b> Devsisters – Seoul, South Korea	
	<ul style="list-style-type: none"> <li>• As an intern on blockchain game team, developed a math model for predicting token prices at decentralized cryptocurrency exchanges (DEX) based on two months of data I collected</li> <li>• Presented results and advised C-level team on the quarterly pricing of blockchain game tokens</li> </ul>	
<b>LANGUAGES AND TOOLS</b>	<b>Languages:</b> Rust, Python, C, C++, Java, SQL <b>Tools:</b> BigQuery, Compute Engine, Git, Docker, Vim, Tmux, Wireshark
